<del>_</del>		

Box I	Observations where certain claims were found unsearchable (Continuation of item 1 of first sheet)
This Inte	rnational Search Report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons
1	Claims Nos because they relate to subject matter not required to be searched by this Authority, namely
2	Claims Nos because they relate to parts of the International Application that do not comply with the prescribed requirements to such an extent that no meaningful International Search can be carried out, specifically
3.	Claims Nos: because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).
Box II	Observations where unity of invention is lacking (Continuation of item 2 of first sheet)
This Inte	ernational Searching Authority found multiple inventions in this international application, as follows:
	see additional sheet
1	As all required additional search fees were timely paid by the applicant, this International Search Report covers all searchable claims.
2	As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee
3 X	As only some of the required additional search fees were timely paid by the applicant, this International Search Report covers only those claims for which fees were paid, specifically claims Nos
	11-30,48,49 all completely, and 1-10,41-47,51-57 all partially representing groups 1,5,6,7,and 8
4	No required additional search fees were timely paid by the applicant. Consequently, this International Search Report is restricted to the invention first mentioned in the claims, it is covered by claims. Nos
Remark	The additional search fees were accompanied by the applicant's protest  X No protest accompanied the payment of additional search fees
	<u> </u>

This International Searching Authority found multiple (groups of) inventions in this international application, as follows:

1. Claims: 1-10,41-47,51-57 all partially

Polynucleotide sequence encoding corn arginyl-tRNA synthetase as represented by SEQ ID NOS:1 and 2 or encoding sequences with at least 80% identity to SEQ ID NO:2, polypeptides with at least 80% identity to SEQ ID NO:2, expression cassettes, host cells and positive selection methods based on said sequences, methods for selecting and obtaining aminoacyl-tRNA synthetases and evaluating compounds for the ability to inhibit aminoacyl-tRNA synthetases based on said sequences and also SEQ ID NOS:23 and 24, polynucleotides comprising at least 30 consecutive nucleotides of SEQ ID NOS:1 or 23

2. Claims: 1-10,41-47,51-57 all partially

Polynucleotide sequence encoding rice arginyl-tRNA synthetase as represented by SEQ ID NOS:3 and 4 or encoding sequences with at least 80% identity to SEQ ID NO:4, polypeptides with at least 80% identity to SEQ ID NO:4, expression cassettes, host cells and positive selection methods based on said sequences, methods for selecting and obtaining aminoacyl-tRNA synthetases and evaluating compounds for the ability to inhibit aminoacyl-tRNA synthetases based on said sequences and also SEQ ID NOS:25 and 26, polynucleotides comprising at least 30 consecutive nucleotides of SEQ ID NOS:3 or 25

3. Claims: 1-10,41-47,51-57 all partially

Polynucleotide sequence encoding soybean arginyl-tRNA synthetase as represented by SEQ ID NOS:5 and 6 or encoding sequences with at least 80% identity to SEQ ID NO:6,polypeptides with at least 80% identity to SEQ ID NO:6,expression cassettes,host cells and positive selection methods based on said sequences,methods for selecting and obtaining aminoacyl-tRNA synthetases and evaluating compounds for the ability to inhibit aminoacyl-tRNA synthetases based on said sequences and also SEQ ID NOS:27 and 28,polynucleotides comprising at least 30 consecutive nucleotides of SEQ ID NOS:5 or 27

4. Claims: 1-10,41-47,51-57 all partially

Polynucleotide sequence encoding wheat arginyl-tRNA synthetase as represented by SEQ ID NOS:7 and 8 or encoding sequences with at least 80% identity to SEQ ID NO:8, polypeptides with at least 80% identity to SEQ ID NO:8, expression cassettes, host cells and positive selection

methods based on said sequences, methods for selecting and obtaining aminoacyl-tRNA synthetases and evaluating compounds for the ability to inhibit aminoacyl-tRNA synthetases based on said sequences and also SEQ ID NOS:29 and 30, polynucleotides comprising at least 30 consecutive nucleotides of SEQ ID NOS:7 or 29

5. Claims: 11-20,41-46,48,51-57 all partially

Polynucleotide sequence encoding corn glutamyl-tRNA synthetase as represented by SEQ ID NOS:9 and 10 or encoding sequences with at least 90% identity to SEQ ID NO:10,polypeptides with at least 90% identity to SEQ ID NO:10,expression cassettes,host cells and positive selection methods based on said sequences,methods for selecting and obtaining aminoacyl-tRNA synthetases and evaluating compounds for the ability to inhibit aminoacyl-tRNA synthetases based on said sequences,polynucleotides comprising at least 30 consecutive nucleotides of SEQ ID NOS:9

6. Claims: 11-20,41-46,48,51-57 all partially

Polynucleotide sequence encoding rice glutamyl-tRNA synthetase as represented by SEQ ID NOS:11 and 12 or encoding sequences with at least 90% identity to SEQ ID NO:12, polypeptides with at least 90% identity to SEQ ID NO:12, expression cassettes, host cells and positive selection methods based on said sequences, methods for selecting and obtaining aminoacyl-tRNA synthetases and evaluating compounds for the ability to inhibit aminoacyl-tRNA synthetases based on said sequences and also SEQ ID NOS:31 and 32, polynucleotides comprising at least 30 consecutive nucleotides of SEQ ID NOS:11 and 31

7. Claims: 11-20,41-46,48,51-57 all partially

Polynucleotide sequence encoding soybean glutamyl-tRNA synthetase as represented by SEQ ID NOS:13 and 14 or encoding sequences with at least 90% identity to SEQ ID NO:14,polypeptides with at least 90% identity to SEQ ID NO:14,expression cassettes,host cells and positive selection methods based on said sequences,methods for selecting and obtaining aminoacyl-tRNA synthetases and evaluating compounds for the ability to inhibit aminoacyl-tRNA synthetases based on said sequences and also SEQ ID NOS:33 and 34,polynucleotides comprising at least 30 consecutive nucleotides of SEQ ID NOS:13 and 33

8. Claims: 21-30,49 all completely, and 41-46, 51-57 all partially

Polynucleotide sequence encoding wheat glutamyl-tRNA synthetase as represented by SEQ ID NOS:15 and 16 or encoding sequences with at least 80% identity to SEQ ID NO:16, polypeptides with at least 80% identity to SEQ ID NO:16, expression cassettes, host cells and positive selection methods based on said sequences, methods for selecting and obtaining aminoacyl-tRNA synthetases and evaluating compounds for the ability to inhibit aminoacyl-tRNA synthetases based on said sequences, polynucleotides comprising at least 30 consecutive nucleotides of SEQ ID NO:15.

#### 9. Claims: 31-46,50-57 all partially

Polynucleotide sequence encoding corn histidyl-tRNA synthetase as represented by SEQ ID NOS:17 and 18 or encoding sequences with at least 90% identity to SEQ ID NO:18, polypeptides with at least 90% identity to SEQ ID NO:18, expression cassettes, host cells and positive selection methods based on said sequences, methods for selecting and obtaining aminoacyl-tRNA synthetases and evaluating compounds for the ability to inhibit aminoacyl-tRNA synthetases based on said sequences, polynucleotides comprising at least 30 consecutive nucleotides of SEQ ID NO:17.

#### 10. Claims: 31-46,50-57 all partially

Polynucleotide sequence encoding soybean histidyl-tRNA synthetase as represented by SEQ ID NOS:19 and 20 or encoding sequences with at least 90% identity to SEQ ID NO:20, polypeptides with at least 90% identity to SEQ ID NO:20, expression cassettes, host cells and positive selection methods based on said sequences, methods for selecting and obtaining aminoacyl-tRNA synthetases and evaluating compounds for the ability to inhibit aminoacyl-tRNA synthetases based on said sequences and also SEQ ID NOS:35 and 36, polynucleotides comprising at least 30 consecutive nucleotides of SEQ ID NOS:19 and 35

#### 11. Claims: 31-46,50-57 all partially

Polynucleotide sequence encoding wheat histidyl-tRNA synthetase as represented by SEQ ID NOS:21 and 22 or encoding sequences with at least 90% identity to SEQ ID NO:22, polypeptides with at least 90% identity to SEQ ID NO:22, expression cassettes, host cells and positive selection methods based on said sequences, methods for selecting and obtaining aminoacyl-tRNA synthetases and evaluating compounds for the ability to inhibit aminoacyl-tRNA

FURTHER INFOR	MATION CONTINUED FROM PCT/ISA/ 210
	synthetases based on said sequences and also SEQ ID NOS:37 and 38,polynucleotides comprising at least 30 consecutive nucleotides of SEQ ID NOS:21 and 37

Special categories of cited documents  A document defining the general state of the lart which is not considered to be of particular relevance.  E earlier document but published on or after the international filing date.  C document which may throw doubts on priority claimis- or which is cited to establish the publication date of another citation or other special reason has specified.  O document referring to an oral disclosure, use exhibition or other means.  P document published prior to the international filing date but liater than the priority date claimed.	Tiliater document published after the international filing date or pricrity date and not in conflict with the application but cited to understand the principle or theory underlying the invention.  K. document of particular relevance, the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone.  Y. document of particular relevance, the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to all person skilled in the art.  S. document member of the same patent family.

Applicant

E.I. DU PONT DE NEMOURS AND COMPANY et al.

- 1. The applicant is hereby notified that this International Preliminary Examining Authority transmits herewith the international preliminary examination report and its annexes, if any, established on the international application.
- 2. A copy of the report and its annexes, if any, is being transmitted to the International Bureau for communication to all the elected Offices.
- 3. Where required by any of the elected Offices, the International Bureau will prepare an English translation of the report (but not of any annexes) and will transmit such translation to those Offices.

#### 4. REMINDER

The applicant must enter the national phase before each elected Office by performing certain acts (filing translations and paying national fees) within 30 months from the priority date (or later in some Offices) (Article 39(1)) (see also the reminder sent by the International Bureau with Form PCT/IB/301),

Where a translation of the international application must be furnished to an elected Office, that translation must contain a translation of any annexes to the international preliminary examination report. It is the applicant's responsibility to prepare and furnish such translation directly to each elected Office concerned.

For further details on the applicable time limits and requirements of the elected Offices, see Volume II of the PCT Applicant's Guide.

#### 2. Novelty (Art. 33(2) PCT)

Amino-tRNA Synthetases (AARS) are enzymes responsible for the charge of specific tRNAs with their appropriate amino-acid. A variety of AARS and plant ESTs (as in D1-D2) are known in the field of plant biology. Concerning the subject-matter of claims 1-10 dealing with com arginyl-tRNA synthetase, no specific arginyl-RS isolated sequences were found in the available prior presenting a high level of identity. Known argRS sequences are derived from micro-organisms (e.g. in D3) or from plants other than com (like Arabidopsis thaliana in D4-D5). However, concerning the polypeptides corresponding to arglnyl-RS with at least 80% identity when compared to SEQ ID N°:2, novelty might become questionable in view of other known plant arginyl-tRNA synthetases. The one isolated from Arabidopsis thaliana (D4-D5) shows 75% identity.

# INTERNATIONAL PRELIMINARY

International application No. PCT/US99/26478

**EXAMINATION REPORT - SEPARATE SHEET** 

#### 3. Inventive step (Art. 33(3) PCT)

Aminoacyl-tRNA Synthetases (AARS) are enzymes responsible for the charge of specific tRNAs with their appropriate amino-acid. The subject-matter of claims 1-10 relates to corn arginyl-tRNA synthetase enzymes.

Different specific AARS and plant ESTs (as in D1-D2) are known in the field of plant biology such as arginyl-RS from Arabidopsis thaliana in D4-D5, or other specific amino-acyl tRNA synthetases (such as Histidyl-RS from rice, glutamyl-RS from rice or barley, etc...)

The problem to be solved by the present invention may therefore be regarded as the provision of a further arginyl-tRNA synthetase selected from com.

The solution provided by the present application is the polynucleotides sequence SEQ ID N°:1 and its encoded polypeptide of SEQ ID N°: 2 or any polypeptide of at least 240 amino-acids that has at least 80% identity (based on the Clustal method of alignment).

Due to the conserved structural motifs among the AARS families and the general knowledge in the field of plant AARS (central role in the cell biosynthesis and common ancestors in the plant evolution), and in absence of any new technical effects, the presence of an inventive step is questionable since it appears to have been obvious to a person skilled in the art to arrive at the claimed subject-matter using routine methods:

The skilled person in the field of plant molecular biology willing to solve the technical problem would look for a known arginyl-RS within plants in order to have an appropriate molecular "probe" to screen "in silico" sequences obtained from com cDNAs. D4 or D5 provide such a specific arg-RS from Arabidopsis thaliana which can be used as a "probe" for sequence alignement with com cDNAs or ESTs. An example of such a routine strategy can be found in D7: the authors analysed a cDNA clone encoding a rice histidyl-RS based on his-RS motif conservation and sequence alignment with other known histidy-RS.

In the present case, obtaining a cDNA library from corn and partially sequencing these sequences is also within the easy reach of the man skilled in the art. The common analysis tools provided by the scientific community (ex. BLAST for

# INTERNATIONAL PRELIMINARY International application No. PCT/US99/26478 EXAMINATION REPORT - SEPARATE SHEET

nucleotide sequence alignment) allow to compare those cDNAs sequences with the arginyl-RS nucleotide sequence from Arabidopsis thaliana disclosed in D4-D5. Consequently, the man skilled in the art would have a high probability of success for selecting a cDNA clone corresponding to the arginyl-RS from corn by selecting the sequence corresponding to the highest score after sequence alignment with arg-RS from Arabidopsis. From D3, it also appears that the use of AARS in host-cell expression, diagnostic assays (D3 page 16), compositions, and methods of screening for arg-RS antagonists and agonists (D3, page 18) are obvious embodiments in the field of AARS.

Therefore, no inventive step can be acknowledged for the claims 1-10, 41-47, 51-57. Consequently, these claims do not meet the requirements of Article 33(3) PCT

Known argRS sequences are derived from micro-organisms (e.g. in D3) or from plants other than corn (like Arabidopsis thaliana in D4-D5). However, concerning the polypeptides corresponding to arginyl-RS with at least 80% identity when compared to SEQ ID N°:2, novelty might become questionable in view of other known plant arginyl-tRNA synthetases. The one isolated from Arabidopsis thaliana (D4-D5) shows 75% identity.

# **EXAMINATION REPORT - SEPARATE SHEET**

#### Inventive step (Art. 33(3) PCT) 3.

Aminoacyl-tRNA Synthetases (AARS) are enzymes responsible for the charge of specific tRNAs with their appropriate amino-acid. The subject-matter of claims 1-10 relates to corn arginyl-tRNA synthetase enzymes.

Different specific AARS and plant ESTs (as in D1-D2) are known in the field of plant biology such as arginyl-RS from Arabidopsis thaliana in D4-D5, or other specific amino-acyl tRNA synthetases (such as Histidyl-RS from rice, glutamyl-RS from rice or barley, etc...).

The problem to be solved by the present invention may therefore be regarded as the provision of a further arginyl-tRNA synthetase selected from corn.

The solution provided by the present application is the polynucleotides sequence SEQ ID N°:1 and its encoded polypeptide of SEQ ID N°: 2 or any polypeptide of at least 240 amino-acids that has at least 80% identity (based on the Clustal method of alignment).

Due to the conserved structural motifs among the AARS families and the general knowledge in the field of plant AARS (central role in the cell biosynthesis and common ancestors in the plant evolution), and in absence of any new technical effects, the presence of an inventive step is questionable since it appears to have been obvious to a person skilled in the art to arrive at the claimed subject-matter using routine methods:

The skilled person in the field of plant molecular biology willing to solve the technical problem would look for a known arginyl-RS within plants in order to have an appropriate molecular "probe" to screen "in silico" sequences obtained from corn cDNAs. D4 or D5 provide such a specific arg-RS from Arabidopsis thaliana which can be used as a "probe" for sequence alignement with corn cDNAs or ESTs. An example of such a routine strategy can be found in D7: the authors analysed a cDNA clone encoding a rice histidyl-RS based on his-RS motif conservation and sequence alignment with other known histidyl-RS.

In the present case, obtaining a cDNA library from corn and partially sequencing these sequences is also within the easy reach of the man skilled in the art. The common analysis tools provided by the scientific community (ex. BLAST for

nucleotide sequence alignment) allow to compare those cDNAs sequences with the arginyl-RS nucleotide sequence from Arabidopsis thaliana disclosed in D4-D5. Consequently, the man skilled in the art would have a high probability of success for selecting a cDNA clone corresponding to the arginyl-RS from corn by selecting the sequence corresponding to the highest score after sequence alignment with arg-RS from Arabidopsis. From D3, it also appears that the use of AARS in host-cell expression, diagnostic assays (D3 page 16), compositions, and methods of screening for arg-RS antagonists and agonists (D3, page 18) are obvious embodiments in the field of AARS.

Therefore, no inventive step can be acknowledged for the claims 1-10, 41-47, 51-57. Consequently, these claims do not meet the requirements of Article 33(3) PCT.

#### NOTES TO FORM PCT/ISA/220

These Notes are intended to give the basic instructions concerning the filing of amendments under article 19. The Notes are based on the requirements of the Patent Cooperation Treaty, the Regulations and the Administrative Instructions under that Treaty. In case of discrepancy between these Notes and those requirements, the latter are applicable. For more detailed information, see also the PCT Applicant's Guide, a publication of WIPO.

In these Notes, "Article", "Rule", and "Section" refer to the provisions of the PCT, the PCT Regulations and the PCT Administrative Instructions, respectively

#### **INSTRUCTIONS CONCERNING AMENDMENTS UNDER ARTICLE 19**

The applicant has, after having received the international search report, one opportunity to amend the claims of the international application. It should however be emphasized that, since all parts of the international application (claims, description and drawings) may be amended during the international preliminary examination procedure, there is usually no need to file amendments of the claims under Article 19 except where, e.g. the applicant wants the latter to be published for the purposes of provisional protection or has another reason for amending the claims before international publication. Furthermore, it should be emphasized that provisional protection is available in some States only

#### What parts of the international application may be amended?

Under Article 19, only the claims may be amended.

During the international phase, the claims may also be amended (or further amended) under Article 34 before the International Preliminary Examining Authority. The description and drawings may only be amended under Article 34 before the International Examining Authority

Upon entry into the national phase, all parts of the international application may be amended under Article 28 or, where applicable, Article 41.

#### When?

Within 2 months from the date of transmittal of the international search report or 16 months from the priority date, whichever time limit expires later. It should be noted, however, that the amendments will be considered as having been received on time if they are received by the International Bureau after the expiration of the applicable time limit but before the completion of the technical preparations for international publication (Rule 46.1).

#### Where not to file the amendments?

The amendments may only be filed with the International Bureau and not with the receiving Office or the International Searching Authority (Rule 46.2)

Where a demand for international preliminary examination has been/is filed, see below

#### How?

Either by cancelling one or more entire claims, by adding one or more new claims or by amending the text of one or more of the claims as filed

A replacement sheet must be submitted for each sheet of the claims which, on account of an amendment or amendments, differs from the sheet originally filed

All the claims appearing on a replacement sheet must be numbered in Arabic numerals. Where a claim is cancelled, no renumbering of the other claims is required. In all cases where claims are renumbered, they must be renumbered consecutively (Administrative Instructions, Section 205(b)).

The amendments must be made in the language in which the international application is to be published.

#### What documents must may accompany the amendments?

#### Letter (Section 205(b)):

The amendments must be submitted with a letter

The letter will not be published with the international application and the amended claims, it should not be confused with the "Statement under Article 19(1)" (see below, under "Statement under Article 19(1)")

The letter must be in English or French, at the choice of the applicant. However, if the language of the international application is English, the letter must be in English; if the language of the international application is French, the letter must be in French.

#### NOTES TO FORM PCT/ISA/220 (continued)

The letter must indicate the differences between the claims as filed and the claims as amended. It must, in particular, indicate, in connection with each claim appearing in the international application (it being understood that identical indications concerning several claims may be grouped), whether

- (i) the claim is unchanged,
- (ii) the claim is cancelled,
- (iii) the claim is new,
- (iv) the claim replaces one or more claims as filed,
- (v) the claim is the result of the division of a claim as filed

# The following examples illustrate the manner in which amendments must be explained in the accompanying letter:

- [Where originally there were 48 claims and after amendment of some claims there are 51]:
   "Claims 1 to 29, 31, 32, 34, 35, 37 to 48 replaced by amended claims bearing the same numbers; claims 30, 33 and 36 unchanged, new claims 49 to 51 added."
- 2 [Where originally there were 15 claims and after amendment of all claims there are 11] "Claims i to 15 replaced by amended claims 1 to 11."
- [Where originally there were 14 claims and the amendments consist in cancelling some claims and in adding new claims]:
  "Claims 1 to 6 and 14 unchanged; claims 7 to 13 cancelled; new claims 15, 16 and 17 added." or
  "Claims 7 to 13 cancelled; new claims 15, 16 and 17 added; all other claims unchanged."
- 4 [Where various kinds of amendments are made]: "Claims 1-10 unchanged; claims 11 to 13, 18 and 19 cancelled, claims 14, 15 and 16 replaced by amended claim 14; claim 17 subdivided into amended claims 15, 16 and 17, new claims 20 and 21 added."

#### "Statement under article 19(1)" (Rule 46.4)

The amendments may be accompanied by a statement explaining the amendments and indicating any impact that such amendments might have on the description and the drawings (which cannot be amended under Article 19(1))

The statement will be published with the international application and the amended claims.

#### It must be in the language in which the international application is to be published.

It must be brief, not exceeding 500 words if in English or if translated into English

It should not be confused with and does not replace the letter indicating the differences between the claims as filed and as amended. It must be filed on a separate sheet and must be identified as such by a heading, preferably by using the words "Statement under Article 19(1)"

It may not contain any disparaging comments on the international search report or the relevance of citations contained in that report. Reference to citations, relevant to a given claim, contained in the international search report may be made only in connection with an amendment of that claim.

#### Consequence if a demand for international preliminary examination has already been filed

If, at the time of filing any amendments and any accompanying statement, under Article 19, a demand for international preliminary examination has already been submitted, the applicant must preferably, at the time of filing the amendments (and any statement) with the International Bureau, also file with the International Preliminary Examining Authority a copy of such amendments (and of any statement) and, where required, a translation of such amendments for the procedure before that Authority (see Rules 55 3(a) and 62 2, first sentence). For further information, see the Notes to the demand form (PCT/IPEA/401)

#### Consequence with regard to translation of the international application for entry into the national phase

The applicant's attention is drawn to the fact that, upon entry into the national phase, a translation of the claims as amended under Article 19 may have to be furnished to the designated/elected Offices, instead of, or in addition to, the translation of the claims as filed

For further details on the requirements of each designated/elected Office, see Volume II of the PCT Applicant's Guide

(PCT Article 18 and Rules 43 and 44)

Boxl	Observations where certain claims were found unsearchable (Continuation of item 1 of first sheet)
This Inter	national Search Report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons
1	Claims Nos because they relate to subject matter not required to be searched by this Authority, namely
,	Claims Nos because they relate to parts of the International Application that do not comply with the prescribed requirements to such an extent that no meaningful International Search can be carried out, specifically
	Claims Nos .  Decause they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).
Box II	Observations where unity of invention is lacking (Continuation of item 2 of first sheet)
This Interi	national Searching Authority found multiple inventions in this international application, as follows
	see additional sheet
	As all required additional search fees were timely paid by the applicant, this International Search Report covers all searchable claims
	As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee
3 X 6	As only some of the required additional search fees were timely paid by the applicant, this International Search Report sovers only those claims for which fees were paid, specifically claims Nos
	11-30,48,49 all completely, and 1-10,41-47,51-57 all partially representing groups 1,5,6,7,and 8
	No required additional search fees were timely paid by the applicant. Consequently, this International Search Report is estricted to the invention first mentioned in the claims, it is covered by claims Nos.
Remark o	The additional search fees were accompanied by the applicant's protest  X  No protest accompanied the payment of additional search fees

This International Searching Authority found multiple (groups of) inventions in this international application, as follows:

1. Claims: 1-10,41-47,51-57 all partially

Polynucleotide sequence encoding corn arginyl-tRNA synthetase as represented by SEQ ID NOS:1 and 2 or encoding sequences with at least 80% identity to SEQ ID NO:2,polypeptides with at least 80% identity to SEQ ID NO:2,expression cassettes,host cells and positive selection methods based on said sequences,methods for selecting and obtaining aminoacyl-tRNA synthetases and evaluating compounds for the ability to inhibit aminoacyl-tRNA synthetases based on said sequences and also SFQ ID NOS:23 and 24,polynucleotides comprising at least 30 consecutive nucleotides of SEQ ID NOS:1 or 23

2. Claims: 1-10,41-47,51-57 all partially

Polynucleotide sequence encoding rice arginyl-tRNA synthetase as represented by SEQ ID NOS:3 and 4 or encoding sequences with at least 80% identity to SEQ ID NO:4,polypeptides with at least 80% identity to SEQ ID NO:4,expression cassettes,host cells and positive selection methods based on said sequences,methods for selecting and obtaining aminoacyl-tRNA synthetases and evaluating compounds for the ability to inhibit aminoacyl-tRNA synthetases based on said sequences and also SEQ ID NOS:25 and 26,polynucleotides comprising at least 30 consecutive nucleotides of SEQ ID NOS:3 or 25

3. Claims: 1-10,41-47,51-57 all partially

Polynucleotide sequence encoding soybean arginyl-tRNA synthetase as represented by SEQ ID NOS:5 and 6 or encoding sequences with at least 80% identity to SEQ ID NO:6,polypeptides with at least 80% identity to SEQ ID NO:6,expression cassettes,host cells and positive selection methods based on said sequences,methods for selecting and obtaining aminoacyl-tRNA synthetases and evaluating compounds for the ability to inhibit aminoacyl-tRNA synthetases based on said sequences and also SEQ ID NOS:27 and 28,polynucleotides comprising at least 30 consecutive nucleotides of SEQ ID NOS:5 or 27

4. Claims: 1-10,41-47,51-57 all partially

Polynucleotide sequence encoding wheat arginyl-tRNA synthetase as represented by SEQ ID NOS:7 and 8 or encoding sequences with at least 80% identity to SEQ ID NO:8,polypeptides with at least 80% identity to SEQ ID NO:8,expression cassettes,host cells and positive selection

methods based on said sequences, methods for selecting and obtaining aminoacyl-tRNA synthetases and evaluating compounds for the ability to inhibit aminoacyl-tRNA synthetases based on said sequences and also SEQ ID NOS:29 and 30, polynucleotides comprising at least 30 consecutive nucleotides of SEQ ID NOS:7 or 29

5. Claims: 11-20,41-46,48,51-57 all partially

Polynucleotide sequence encoding corn glutamyl-tRNA synthetase as represented by SEQ ID NOS:9 and 10 or encoding sequences with at least 90% identity to SEQ ID NO:10,polypeptides with at least 90% identity to SEO ID NO:10,expression cassettes,host cells and positive selection methods based on said sequences,methods for selecting and obtaining aminoacyl-tRNA synthetases and evaluating compounds for the ability to inhibit aminoacyl-tRNA synthetases based on said sequences,polynucleotides comprising at least 30 consecutive nucleotides of SEQ ID NOS:9

6. Claims: 11-20,41-46,48,51-57 all partially

Polynucleotide sequence encoding rice glutamyl-tRNA synthetase as represented by SEQ ID NOS:11 and 12 or encoding sequences with at least 90% identity to SEQ ID NO:12, polypeptides with at least 90% identity to SEQ ID NO:12, expression cassettes, host cells and positive selection methods based on said sequences, methods for selecting and obtaining aminoacyl-tRNA synthetases and evaluating compounds for the ability to inhibit aminoacyl-tRNA synthetases based on said sequences and also SEQ ID NOS:31 and 32, polynucleotides comprising at least 30 consecutive nucleotides of SEO ID NOS:11 and 31

7. Claims: 11-20,41-46,48,51-57 all partially

Polynucleotide sequence encoding soybean glutamyl-tRNA synthetase as represented by SEQ ID NOS:13 and 14 or encoding sequences with at least 90% identity to SEQ ID NO:14,polypeptides with at least 90% identity to SEQ ID NO:14,expression cassettes,host cells and positive selection methods based on said sequences,methods for selecting and obtaining aminoacyl-tRNA synthetases and evaluating compounds for the ability to inhibit aminoacyl-tRNA synthetases based on said sequences and also SEQ ID NOS:33 and 34,polynucleotides comprising at least 30 consecutive nucleotides of SEQ ID NOS:13 and 33

8. Claims: 21-30,49 all completely, and 41-46, 51-57 all partially

Polynucleotide sequence encoding wheat glutamyl-tRNA synthetase as represented by SEQ ID NOS:15 and 16 or encoding sequences with at least 80% identity to SEQ ID NO:16,polypeptides with at least 80% identity to SEQ ID NO:16,expression cassettes,host cells and positive selection methods based on said sequences,methods for selecting and obtaining aminoacyl-tRNA synthetases and evaluating compounds for the ability to inhibit aminoacyl-tRNA synthetases based on said sequences ,polynucleotides comprising at least 30 consecutive nucleotides of SEQ ID NO:15.

#### 9. Claims: 31-46,50-57 all partially

Polynucleotide sequence encoding corn histidyl-tRNA synthetase as represented by SEQ ID NOS:17 and 18 or encoding sequences with at least 90% identity to SEQ ID NO:18, polypeptides with at least 90% identity to SEQ ID NO:18, expression cassettes, host cells and positive selection methods based on said sequences, methods for selecting and obtaining aminoacyl-tRNA synthetases and evaluating compounds for the ability to inhibit aminoacyl-tRNA synthetases based on said sequences, polynucleotides comprising at least 30 consecutive nucleotides of SEQ ID NO:17.

#### 10. Claims: 31-46,50-57 all partially

Polynucleotide sequence encoding soybean histidyl-tRNA synthetase as represented by SEQ ID NOS:19 and 20 or encoding sequences with at least 90% identity to SEQ ID NO:20, polypeptides with at least 90% identity to SEQ ID NO:20, expression cassettes, host cells and positive selection methods based on said sequences, methods for selecting and obtaining aminoacyl-tRNA synthetases and evaluating compounds for the ability to inhibit aminoacyl-tRNA synthetases based on said sequences and also SEQ ID NOS:35 and 36, polynucleotides comprising at least 30 consecutive nucleotides of SEQ ID NOS:19 and 35

#### 11. Claims: 31-46,50-57 all partially

Polynucleotide sequence encoding wheat histidyl-tRNA synthetase as represented by SEQ ID NOS:21 and 22 or encoding sequences with at least 90% identity to SEQ ID NO:22, polypeptides with at least 90% identity to SEQ ID NO:22, expression cassettes, host cells and positive selection methods based on said sequences, methods for selecting and obtaining aminoacyl-tRNA synthetases and evaluating compounds for the ability to inhibit aminoacyl-tRNA

# International Application No PCT/US 99 /26478 FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 210 synthetases based on said sequences and also SEQ ID NOS:37 and 38,polynucleotides comprising at least 30 consecutive nucleotides of SEQ ID NOS:21 and 37 $\,$
